

CONTENTS

UNIT I

1. WATER AND ITS TREATMENT **1.1 – 1.58**

1.1	Introduction	1.1
1.2	Sources of Water	1.2
1.3	Hardness of Water	1.3
1.4	Estimation of hardness by EDTA Method	1.16
1.5	Boiler Feed Water	1.21
1.6	Boiler Problems with Hard Water	1.22
1.7	Treatment of Boiler Feed Water	1.28
1.8	Internal Treatment (or) Internal Conditioning	1.29
1.9	External Treatment (or) External Conditioning	1.31
1.10	Desalination of Brackish Water.....	1.42
	Problems.....	1.44

UNIT II

2. SURFACE CHEMISTRY **2.1 – 2.30**

2.1	Introduction	2.1
2.2	Terminology of Surface Chemistry	2.2
2.3	Types of Adsorption	2.4
2.4	Factors affecting Adsorption of Gases on Solids	2.7
2.5	Adsorption of Solutes from Solutions	2.8
2.6	Adsorption Isotherm	2.11
2.7	Freundlich Adsorption Isotherm	2.14
2.8	Langmuir Adsorption Isotherm	2.15
2.9	Adsorption (or) Contact theory of Catalysis	2.19
2.10	Kinetics of Surface Reactions	2.22
2.11	Applications of Adsorption	2.25
2.12	Applications of Adsorption on Pollution Abatement	2.27

3. CATALYSIS **3.1 – 3.24**

3.1	Introduction	3.1
3.2	Catalyst	3.2
3.3	Auto Catalysis	3.7
3.4	Acid-base Catalysis	3.8
3.5	Application of Catalysis	3.12
3.6	Catalytic Converter	3.12
3.7	Enzyme Catalysis	3.14

UNIT III

4. ALLOYS **4.1 – 4.22**

4.1	Introduction	4.1
4.2	Definition of Alloys	4.2
4.3	Classification of Alloys	4.2
4.4	Properties of Alloys	4.3
4.5	Significance of Alloying	4.6
4.6	Effect of Alloying Elements	4.8
4.7	Heat Treatment of Alloys	4.10
4.8	Classification (or) Types of Alloys	4.17
4.9	Ferrous alloys (or) Alloy Steels	4.18
4.10	Important Ferrous Alloys	4.18

5. PHASE RULE **5.1 – 5.28**

5.1	Introduction	5.1
5.2	Phase Rule	5.1
5.3	Definition of Terms Used	5.2
5.4	Phase Diagram	5.9
5.5	Applications of Phase Rule One - Component System (Water System)	5.11
5.6	Two Component Alloy System (or) Multi Component Equilibria	5.16
5.7	Experimental Method of Construction of a Simple Eutectic Phase Diagram	5.19

5.8	Binary Alloy System (or) The Simple Eutectic System	5.21
5.9	Differences between Melting Point, Eutectic Point and Triple Point	5.27

UNIT IV

6. FUELS 6.1 – 6.40

6.1	Introduction	6.1
6.2	Classification of Fuels	6.3
6.3	Coal	6.6
6.4	Analysis of Coal	6.7
6.5	Metallurgical Coke	6.13
6.6	Manufacture of Metallurgical Coke	6.15
6.7	Petroleum (Gasoline)	6.19
6.8	Refining of Petroleum (or) Crude Oil	6.20
6.9	Cracking	6.23
6.10	Synthetic Petrol	6.23
6.11	Knocking	6.24
6.12	Octane Number (or) Octane Rating	6.25
6.13	Diesel Oil	6.26
6.14	Cetane Number (or) Cetane Rating	6.28
6.15	Natural Gas	6.31
6.16	Compressed Natural Gas (CNG)	6.32
6.17	Liquefied Petroleum Gas (LPG)	6.33
6.18	Power Alcohol / Ethanol Fuel	6.35
6.19	Bio-Diesel	6.38

7. COMBUSTION OF FUELS 7.1 – 7.38

7.1	Introduction	7.1
7.2	Calorific Value (CV)	7.2
7.3	Types of Calorific Values	7.3
7.4	Theoretical Calculation of Calorific Value	7.4
7.5	Calculation of Minimum Quantity of Air Required for the Complete Combustion of a Fuel	7.9

7.6	Problems based on Combustion Reaction	7.14
7.7	Ignition Temperature	7.32
7.8	Explosive Range or Flammable Range	7.33
7.9	Flue Gas Analysis (ORSAT's Method)	7.34

UNIT V

8. ENERGY SOURCES 8.1 – 8.30

8.1	Introduction	8.1
8.2	Nuclear Reactions	8.2
8.3	Nuclear Fission	8.5
8.4	Nuclear Fusion	8.6
8.5	Nuclear Chain Reactions	8.9
8.6	Nuclear Energy	8.11
8.7	Nuclear Reactor or Pile	8.15
8.8	Light Water Nuclear Power Plant	8.19
8.9	Breeder Reactor	8.19
8.10	Solar Energy	8.21
8.11	Photovoltaic Cells (or) Solar Cell	8.22
8.12	Wind Energy	8.25

9. STORAGE DEVICES 9.1 – 9.26

9.1	Introduction	9.1
9.2	Types of Batteries	9.3
9.3	Important Primary Battery	9.5
9.4	Important Secondary Batteries	9.7
9.5	Fuel Cell	9.15
9.6	Supercapacitors	9.20
