

Contents

1	Matrices	1
1.1	Introduction	1
1.2	Vectors	2
1.3	Matrices	7
1.4	Eigenvalue and Eigenvector	14
1.5	Properties of eigenvalue eigenvectors	48
1.6	Cayley – Hamilton Theorem	60
1.7	Diagnolization	83
1.8	Quadratic Forms	111
2	Vector Calculus	155
2.1	Introduction	155
2.2	Gradient of a Scalar Function	157
2.3	Divergence and Curl of a Vector Function	180
2.4	Line and Surface Integrals	204
2.5	Volumeintegral	215
2.6	Area of a curved Surface	225
2.7	Green’s Theorem	245
2.8	Gauss Divergence Theorem	266
2.9	Stoke’s Theorem	291
3	Analytic Functions	307
3.1	Introduction	307
3.2	Necessary Conditions - C.R. equations	310
3.3	Sufficient Conditions	311
3.4	Properties of analytic functions	324
3.5	Construction of an analytic function-Milne Thomson Method	332
3.6	Harmonic functions	358

3.7	Conformal mappings	376
3.8	Simple transformations	380
3.9	Standard transformations	397
3.10	Bilinear transformations	429
4	Complex Integration	447
4.1	Introduction	447
4.2	Cauchy's Integral Theorem	449
4.3	Cauchy's Integral Formula	454
4.4	Taylor's Series	472
4.5	Laurent's Theorem	477
4.6	Singularities	497
4.7	Residues	498
4.8	Cauchy's Residue Theorem	508
4.9	Contour Integration	531
5	Laplace Transforms	589
5.1	Laplace Transform	589
5.2	Properties	591
5.3	Initial and Final value Theorem	650
5.4	Inverse Laplace Transforms	656
5.5	Convolution Theorem	693
5.6	Application of Laplace Transforms	702
	Index	719
